Date of submission: Friday, 27 April 2018

Submission: "I would like to respectfully ask that NSW implement a fair regulated Feed in tariff price for home solar electricity. It is not fair to homeowners who have invested in solar PV to be paid a pittance for solar they contribute to energy retailers. Electricity that has been contributed to the grid has brought down costs for the suppliers and this should be reasonably passed on to the homeowners. Rooftop solar systems are contributing to the overall environmental health and well-being of this state and should not be penalised unfairly.

Thank you for the opportunity to contribute this submission."
