**SOLAR FEED-IN TARIFFS 2017/18**

**Wednesday, 10 May 2017**  
7:57:21 PM

I am a rooftop solar owner and have watched the price of feed-in tariffs shrink to the paltry levels they are today in order to prop up an ailing fossil fuel industry. In a free market, this would be regarded as unfair trade practice, since it massively disadvantages customers. Please restore the balance to a more realistic price around 11.6c-14.6c to reflect the true value of rooftop solar. I'm a baby boomer about to retire and fed up with the politics surrounding energy and climate change. I just want a fair go for doing my bit to help create a cleaner world and save some money into the bargain. Please inject some honesty into the system.
