

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Thursday, 11 May 2017
10:47:53 PM

Dear Sir/Madam,

I have 3 kW of solar PV on my roof. If the feed-in tariff was increased I would install more and batteries. I have purchased a PHEV and so our electricity usage has gone up.

The price of the tariff should reflect the wholesale price in order to properly reward investment and encourage new investment at the source of consumption.

Solar PV reduces the overall pollution load generated by the energy sector and reduces the GHG emissions. While you may be concerned about your superannuation performance, I am concerned about my children's prospects of having a future. Will they have the same opportunity to live to your age?

Thank you
Chris Reis
