Submission: To dump 162,000 litres of sewerage into Catherine Hill Bay is to mass genocide on the Central Coast of NSW. You're talking about damaging thousands of ecosystems as well as ruining the ocean around the new Mooney development and Catherine Hill Bay. And why ? Because it's CHEAPER ? You've already blown millions building the grossly out of order Mooney Development. This is a grave mistake and will contribute to the death of animals , ecosystems , nature , the ocean , not to mention the grossly overstepped contribution to global warming. Perhaps a different route would sway you. Imagine if a company such as yourself , was dumping 162,000 litres of poisonous effluent onto your backyard or driveway every single day but there could be a more controlled way of handling it , such as a conversion tank or something like that. Cheap companies like " SOLO " Water see cheap ways out as a catalyst for making bad environmental decisions , I for one , hope they can choose to instead offer an earth - friendly solution to this problem , not a short term , damaging one.
