Submission: Under NO circumstances should partially treated effluent be discharged onto, or in close proximity to a public beach area. In particular this proposal seeks to discharge in close proximity to where the public use of this beach is made including the nearby surf club. The ONLY situation in which such a discharge should even be considered is if the discharge has been treated to POTABLE standards to ensure public safety. Proponent should be required to adhere to the original approval standards, or produce only POTABLE water for discharge in this area. There may be alternative engineering solutions available, such as deep ocean outfalls, which could be considered.
