SOLAR FEED-IN TARIFFS 2017/18

Tuesday, 9 May 2017

11:41:07 AM

That you support a fair price for solar;

The feed-in tariff should increase in line with the wholesale price of electricity;

The feed-in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum;

The feed-in tariff should represent the true value of solar, this means recognising the environmental and health benefits and the network benefits of roof solar.

In my experience I have had 2 solar systems where I was getting 20cpl rebate but the system cost me 20k. So very little return especially when the government took the extra rebate we got from energy retailers and include this in the 20cpl rebate. I have since bought another house and put solar at a much cheaper rate to save some power plus contribute to helping the environment for myself, my kids and future generations. So I don't see why energy retailers should make a profit of my energy generation and give me a measly 6c per kilowatt for my life investment. Sometimes I think about turning off as if I don't benefit. Why should they. Especially when I go away and not use much energy
