Date of submission: Tuesday, 8 May 2018

Submission: "I submit that in the coming years, given the problems with poisoning our planet, solar and other forms of renewable energy generation will be all the more vital. For years rooftop solar owners who were not in receipt of the original generous feed-in tariffs have been receiving one-fourth of any power we imported from the grid. Our contribution is an important one and it is only fair that we be fairly compensated for the energy we contribute. Please give consideration to making any changes to the benchmark tariff fair. 8 or 9 cents is simply not fair or reasonable.

Respectfully yours,
David Baird"
