Submission: World's best practice of saving water is to follow Isreal's lead: get rid of connection and service charges, and only pay per litre of water. Which means water per litre is more expensive to make people save water. Overall the people using less water would pay less per year, and those wasting water would pay more per year. Currently with water so cheap per litre there is little to no incentive to change habits. Price per litre would be set so the water company makes exactly the same amount of profit as per old price scheme
