**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**

5:06:35 PM

I support the change to a fairer price for solar feed-in tariffs. For too long the electricity companies have been price gouging. I think that tariffs should be regulated so that minimum rebates are guaranteed. These should increase in line with general charges. Companies could then compete for customers by paying more for the solar power they receive.

These changes will help households who want to install solar panels and are restricted by the high cost.
