SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
12:00:09 PM

I support a fair price for solar. The feed-in tariff should increase in line with the wholesale price of electricity and not just be a benchmark range. It should be regulated so retailers have to offer it as a minimum and it should represent the true value of solar. This means recognising the environmental and health benefits and the network benefits of rooftop solar.
