Submission: this has to be a bit of fake news, the government are trying to force agl to keep liddel power station open another 5yrs and here you are trying to reduce the tariff and make solar roof top power supply less appealing, surely this is not what any sane company /government would be thinking, feed in tariffs are meant to give people incentive to go solar not the opposite. i think it is time to investigate the impartiality of ipart as most decisions of late seem to be well biased towards big business, a review of their charter is long overdue.
