

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**  
11:36:36 AM

Dear sirs,

I am pleased to see that IPART has recommended an increase in the solar feed in tariff, however as I am on a time of use tariff it is still well below what I am being charged in the middle of the afternoon when electricity rates are highest and solar power is at its peak.

I find it troubling that my electricity provider can on sell electricity produced by home owners at a massive profit margin at negligible additional cost to them.

I would encourage IPART to consider the many benefits that solar provides to the electrical network, increase the feed in tariff to more a realistic level and stop the major electricity suppliers from making excessive profits from the home solar community.
