

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Sunday, 21 May 2017

6:09:42 PM

The increased production of electricity from renewable sources such as solar is a must and the faster the increase the better chance this world has in remaining a healthy livable planet. A reasonable feed-in tariff will encourage individuals to install their own units and the chance of recouping some of the cost adds incentive.

Earth cannot continue down the path of fossil burning power generation, it is terminal!
