SOLAR FEED-IN TARIFFS 2017/18

Saturday, 20 May 2017

12:02:01 PM

In this time of global warming, it is critical that NSW support a fairer price for solar, with a feed in price equating with wholesale prices of electricity and taking into account the environmental benefits of solar power.

10 years ago we were committed to spending \$45,000 (10 kilowatt system) on solar electricity only to be told days before the panels were to be installed that the house thus the panels were too far away from the transformer and the line inadequate to feed into the grid. We were terribly disappointed and felt disadvantaged because our rural electricity provider had not updated the infrastructure at the end of the line where we live.
