SOLAR FEED-IN TARIFFS 2017/18

Sunday, 21 May 2017

8:17:43 PM

Although retailers were well aware of the closing date of the NSW Solar Bonus Scheme, it was apparent that they were well aware of the loophole that was available to them on the termination of the scheme, ie the profitable delay in installing new digital meters for customers (in my case, over three months). Just how much they profited from the energy being fed into the grid by customers will probably never be known.

The pathetic current feed-in tariff amount should increase in line with the wholesale price of electricity.

The feed-in tariff should represent the true value of solar, which means recognising the environmental and health benefits and the network benefits of rooftop solar.
