Submission: "I support the need to offer a fair price for Solar Energy from home owners on the basis that if it is indeed a very low cost energy then that low cost must be reflected in the retail price for people without Solar Generation. I for one have not seen any reduction of retail Energy prices due to FIT costs in the recent past rather steadily increasing prices in spite of all the Govt. spin. To increase the FIT price simply to establish the need for higher retail prices is unacceptable at least by myself."
