

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

I support a fair price for solar.

The price set by IPART should be a minimum price, which accounts for the true value, the avoided pollution costs, the environmental and health benefits and the network benefits.

I would also like to see virtual net metering. Solar generation by a customer at one site should be able to be used by the same customer at a second site on the same distribution line. It is simply absurd to dig a trench and lay a new cable to link two sites when the distribution line could do the same job by offsetting one meter against the other.
