

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**  
11:25:40 AM

Dear sir

Despite living in an area with significant tree cover, I purchased a 3kw solar system as evidence primarily of my commitment to fighting climate change.

However, having now used the system for some years, always without government subsidy, I am convinced it is unjust that I should get a return for producing electricity for the grid that bears no relationship to the amount I pay for precisely the same retail electricity.

I would therefore strongly support a move that would bring an element of fair play into the present feed-in tariff. It would also encourage installation of solar by those who have not already done so, absolutely essential if we are to transition to distributed, no carbon, electricity production.

Yours faithfully  
Frank Smith
