Submission: "Dear Sir/Ms.

It is with much concern that I join this campaign of protest in expressing my disgust at your proposed cuts to the feed in tariffs for solar power.

We have a 4 kw system that subsidises our usage and in that adding to a state wide lowering of demand which in term allows for a greater availability for all during peak loadings. We are part of a national community of producers who assist in providing a vital service to our country.

Why are we being penalised for this.? I'll tell you why. It's all about marketing and money and protection of big business in a decrepit energy business world. It's not about providing an essential service to the community at a fair price.

It's also not about providing a clean and environmentally necessary service which gives to all, it's about giving to very few greedy people with their own interests in mind.

Our climate is in crisis we need to forsake much of the old paradigm and act in a responsible way to preserve our country and the planet. Reducing our dependance on coal is part of the new story we have to embrace.

Don't penalise us for doing our bit."
