**SOLAR FEED-IN TARIFFS 2017/18**

**Tuesday, 9 May 2017**

1:04:52 PM

I am one of the many solar owners who are disgusted with the current feed in tariff rate that we have been given since the beginning of the year.

It in no way represents the true value of our solar input to the system recognising the financial, environmental, health and network benefits of our contribution.

The proposed increases should not simply be a range that retailers may use as a guideline, but should be a regulated minimum that they must offer.

I for one am fed up with being ripped off by unscrupulous retailers making large profits from my solar panels.

I have been waiting (and still am) for the promised smart meter to be installed so my situation is even worse than it could be.

In view of the threatened 40% increase slated to take place later this year it would also be imperative that any increase in feed in tariff be tied to the retail price of electricity.
