**SOLAR FEED-IN TARIFFS 2017/18**

**Sunday, 21 May 2017**

6:57:33 PM

The feed in price for solar should reflect the true worth of the electricity generated.

The feed-in tariff should increase in line with the wholesale price of electricity;  
The feed-in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum;

The feed-in tariff should represent the true value of solar, this means recognising the environmental and health benefits and the network benefits of rooftop solar;  
As an aged pensioner I took a loan to install rooftop solar believing that I was going to near eliminate my electricity bills. I am now faced with bills almost as big as without solar, and a \$12 solar rebate for 3 months. Really! - where is the fairness in this?
