SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

12:32:37 PM

I would expect to see that solar power is recognised as an essential power source for safeguarding the environment.

That the feed-in tariff should be regulated and retailers accept it as minimum for their customers.

I want a fair price for my solar power
and that the feed in tariff increase in line with the wholesale price.

Whilst I only have a 1kilowatt panel, which was installed some years ago, it meets my needs as my home is built to be solar passive. I have always received a rebate until now. Bit sad really.

I'm a pensioner trying to get by and the rebate just helped for unexpected bills. Please consider the fairness of a rebate, particularly for people for me who have been environmentally aware and not being greedy.
