Submission: "How about a fair go ,I've spent over \$20000 on solar panels for originally. 60 c kw rebate to have that reduced to 6 c kw then after a fight for a fair return we were allocated 11 c / kw to have that taken down to 8-9 c / kw . This is not a good return for my outlay considering the Liddell power station is closing and NSW needs our power we put back into the grid for the government to make a profit .

Big brother needs to think about the little people all supplying the electricity and pay a proper fair price . We have just retired from working all my life from 16 yrs of age to now a self funded retiree and we get no help or concessions at all from the government so I think it's about time we got a fair go, people in high places need to see how the other half live and budget, please give this some serious consideration .thank you."
