

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

2:01:58 PM

I support a fairer price for solar. Having invested in rooftop solar it is unfair that we are being ripped off by such a low feed in tariff. The tariff should be regulated with a mandatory minimum representing the true value of the solar generation. And this should increase in line with wholesale price increases. Solar generation is an investment made by people other than the power companies and it has the bonus of environmental benefits as well as benefits to the network. Solar power generators also become more aware of their power consumption and this results in less waste and better environmental outcomes.

Sincerely, Ian Paananen
