Submission: My family and I frequent the area as a holiday / weekend destination. I understand that the current treated water is sprayed onto the land, where it can fertilize the grass, we feel that allowing the sewage water to be pumped into the local river system will cause an environmental disaster for the local wildlife my pets and children. It will have a flow on effect to the main beach where we swim, sun bake and relax and play by allowing this sort pollution to our otherwise pristine area would be a massive negative impact on our standard of living.
