SOLAR FEED-IN TARIFFS 2017/18

Wednesday, 10 May 2017
12:24:00 PM

It has always been very unfair that solar producers get much less for their electricity than what they are paying for at night. How can electricity companies justify this as it is the same electricity? I pay 28c per kwh for power from the grid, but I only get back 5c per kwh for the electricity I feed into the grid. Please think of fairness when considering this.
