**SOLAR FEED-IN TARIFFS 2017/18**

**Sunday, 21 May 2017**

11:36:30 AM

It is an essential future strategy for our State that energy production shifts asap from fossil to renewable sources. For this to happen expeditiously, there should be:

- : a fair price for solar, to promote community uptake of the technology
- : a feed-in tariff which stays on a par with the wholesale price of electricity
- : improved arrangements for solar-generated electricity should be regulated so retailers have to offer it as a minimum
- : promotion of the environmental, health, and network benefits of rooftop solar
