

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

4:47:47 PM

I support IPART's proposal to increase the solar feed-in tariff benchmark to 11.6-14.6c per kWh in line with the increased wholesale price of electricity. The feed-in tariff should represent the important value of solar for the environment and Governments should be doing much more to encourage the community to install solar on every rooftop in Australia. Let's lead the way with solar by encouragement. The feed-in tariff should be regulated so retailers have to offer it as a minimum.
