**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**

5:13:10 PM

For over 5 years now, I have had to endure the low prices provided to solar power generation going to the grid. I receive about 1 tenth of the amount that I have to pay for peak time power (receive 5c per kWh and pay 49.8c at peak). I've now installed batteries to help, however it is unfair that we are paid such a low price for the feed-in.

The feed-in tariff should represent the true value of solar, which means recognising the environmental and health benefits and the network benefits of rooftop solar. It should also be linked to the wholesale price of power.
