SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
11:48:58 AM

The current situation needs to change with electricity wholesalers paying a ridiculous price for solar feed in, which effectively equates to stealing power from individuals then on selling at a premium green price to their customers, so I completely support the pricing of solar feed in tariff being regulated in line with the wholesale electricity price to ensure companies act in a fair & ethical manner and not allow the price of solar feed in to become irrelevant or manipulated to only benefit the power companies in the future.
