Submission: "Dear Ipart

Australian consumers pay the highest prices in the world for power. To decrease what we Solar provide power to the energy grid providing clean safe healthy power assisting Climate change issues, the major expense we have outlaid to assist this process the 11cents per killowatt is a minor amount in comparison to what the power price per kilowatt is sold to the consumer. Please consider leaving the current 11c as is. Would be much appreciated.

Kind regards

J Franklin
