8:01:40 AM

Dear Sir

I have enjoyed Solar hot water since July 1978 a wonderful free from the sun clean energy all these years.

2010 our first 9 roof top panels only feeding the grid.

2014 another system added to feed the house first then feed the grid for us a great success. success story of a great free from the sun clean power highly recommended that has grown now into Solar Thermal meaning with salt it is now become storable I have read.

Looking at the back of Power bills for retailers to charge a whopping 28c per Kw and a tiny amount of approx 6c a Kw to Solar providers generating Power to the Grid is unbelievable grossly unfair. Sir, I would hope and pray you would consider a fair price deal for what we are providing, that is additional Electricity to the grid that clean and free from unwanted emissions.

Yours respectfully

J Franklin
