SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
11:50:51 AM

I want a better feed in tariff, presently it's 8 centsKW but buy power at 4 times this price. I supply 2.5KW and get bugger all for it. AGL takes my power and on sells it to someone else at an inflated price. 8 cents doesn't properly cover my investment doesn't come close! AGL get increased capacity because of me and other homes just like me and it costs them chicken feed. The system is penalising those who invest in rooftop solar we are for all purposes mini generators and small businesses operators and are getting shafted by retailers and government.
