SOLAR FEED-IN TARIFFS 2017/18

Friday, 12 May 2017
8:33:42 PM

How is it fair for electricity companies to pay less for solar power during peak times than they even charge the same person for electricity usage during off-peak times. They can take our electricity from solar and then charge users 10 times the rate that they pay for it. This is like a 900% mark-up. That is clearly unfair. If shops did the same in a normal market then they would very quickly go bankrupt. The poor feed-in rate is clearly unfair and does not recognise the financial commitment made by the suppliers of solar energy. It is a clear rip-off that has been sanctioned by a government that very little commitment to a sustainable future.
