Submission: "It is time for fair treatment with FIT. The continued threats to solar owners just keep coming. I installed solar so I could have a decent retirement, without being afraid of turning on the air conditioning and not being able to pay the bill. Now the FIT is going to be reduced, so your organisation can guarantee the big end of town higher profits and screw the individual with less rebates.

Gentlemen, this is not a third world country yet, all we are asking is a fair deal, after all we have invested a lot of money by installing solar panels and solar hot water, taking pressure off the grid, for what?

Too much more of these threats a lot more users will disconnect from the grid, because we are sick and tired of being manipulated by governments with no vision other than being elected for the next term and stuff the constituents.

All the solar users want is an Australian Fair Go!"
