SOLAR FEED-IN TARIFFS 2017/18

Tuesday, 9 May 2017
5:03:04 PM

As I lived for 9 years with a stand alone solar system, on .9kw, yes less than 1 kw, I know the value of the system,. and of course to have solar panels with the opportunity to send to the grid any unused energy, is a great way to go. But surely, feed in tariffs MUST be about equal to what we pay for power from the grid, when I put panels on my new house, if there is a decent feed in tariff I will consider sending my surplus power to the grip, but without a decent feed in tariff, I will be opting for batteries again. Too many people go this way, and there will not BE a grid. Thanks
