Submission: We have a 5.7Kw solar power system on our roof that feeds back to the grid. We purchased the system for \$20,000 of our own money thinking that we could generate clean energy and benefit from reduced power bills. Unfortunately, we are being used by the power companies and will never recoup any of the initial outlay. We are disgusted at the power companies seeking to use us for their own profits. We have been and are currently being paid even less than the proposed solar feed in tariff benchmark, so what hope is there for the future of solar energy? It is all sickening.
