**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**

6:16:25 PM

I support a fair price for solar; I think that the feed-in tariff should increase in line with the wholesale price of electricity.

The regulated feed-in tariff should be a minimum value, and allow retailers to offer a higher feed-in tariff to attract customer to their offering.

The regulated minimum feed-in tariff should reflect the environmental and health benefits of rooftop solar as well as the economic benefits of reduced or deferred investment in the distribution grid.
