SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017
11:59:39 AM

The feed in tariff must value the environmental and health benefits that rooftop solar investors have and are making.

Not only did we install solar energy [when it was much more expensive] for the good of the planet, but having installed it we became much more aware and conservative about our energy usage.

I support a fair price for solar which should increase in line with the wholesale price of electricity and is regulated so retailers have to offer it as a minimum of the benchmark range.

I am a solar citizen, I support solar, and I vote.
