

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

12:47:07 PM

As someone studying Renewable Energy Engineering (UNSW) the government must understand the value of distributed generation to prevent network augmentation in the future. The reduced FiT will once again stunt the PV Industry, as payback times will be reduced for many households who cannot load shift- especially given that systems which include battery storage are not yet economically feasible for the majority of households. Therefore there is a role for government for the support and continuation of PV industries through a higher FiT.
