**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**

12:32:49 PM

The feed-in tariff must keep up with wholesale power prices.

The feed-in tariff must be regulated and NOT optional for suppliers. This would bring NSW in line with other States.

The feed-in tariff should recognise the contribution solar is making to the Climate Change mitigation targets.

A more realistic feed-in tariff would give me a better incentive to use off-peak power and feed in my excess generation during the daylight peak times when the network needs it. I currently use most of my power during the daylight hours so I use it directly and it does not get into the network.

So, the feed-in tariff has to be fair and recognise roof-top solar as the major generation source that it is.
