**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**  
11:44:56 AM

I chose solar to be self sufficient using the gift of nature- sunshine. Citizens have the right to control their own power source via solar and not be ripped off by a system that has no vision , logic , common sense or consideration for our water table ,protection of our agricultural growth areas . In the next 10 years the population will increase incredibly & how do they think we are going to grow enough healthy food for everyone. The only choice is SOLAR & wind farms . forget the fracking and coal as it is destructive in every way and 1950s mentality
