

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

**Friday, 19 May 2017**

10:56:18 PM

Dear Sir/Madam

a fairer price for the feed in tariff of roof top solar energy would encourage more people to install solar panels which will assist Australia to reach the targets to which it agreed at the climate change summit in Paris.

A fairer feed in tariff would increase in line with the wholesale price of solar energy and the price should be regulated.

I have had solar panels since before the tariff was introduced due to the principle that we should all do the best we can for the planet, and it was nice to later be paid for it. But I find it perplexing that in this era my solar energy which is fed into the grid is less valuable than energy fed into the grid by dirty fossil fuel energy generators.

A fair price for roof top solar energy is needed

Kind regards

Kate
