SOLAR FEED-IN TARIFFS 2017/18

Tuesday, 9 May 2017
8:00:26 PM

The 60c feed-in tariff was ridiculously high and the current 6c is ridiculously low. I live in a rural area. With the current low feed-in price of solar and the rapidly reducing cost of energy storage, many of my neighbours are considering disconnecting from the grid. If this happens there will be less customers to support the ongoing maintenance of the network. Increasing the feed-in tariff to a realistic price will help retain all these NEM participants (including me).
