SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

1:50:09 PM

I am a solar panel owner, and our household is investing in more solar panels, as well as a battery to help with storing the solar power we make.

As concerned citizens, we are doing what we can to help to make Australia's environment healthier for this generation, as well as the next generations.

we believe a fair price should be paid for any solar power that we make and is returned to the grid.

Through householders like us, we are helping with electricity production and taking a load off our overworked grid and planet.

As this is a big investment, a fair price should be paid to allow solar owners to continue to invest in this and other important infrastructure.

The feed-in tariff, should reflect the increase in line with the wholesale price of electricity.

kind regards

Lisa and Scott Bensley
