

**SUBMISSION TO IPART REVIEW**  
**SOLAR FEED-IN TARIFFS 2017/18**

**Wednesday, 10 May 2017**

7:05:41 AM

Dear members of IPART,

As a small but nevertheless real producer of electricity to the grid from the solar panels on my shed roof, I would like to support your recommendation that the feed-in tariff for such electricity is increased. Solar is a far preferable way to produce electricity than coal, and how are we going to move ahead in Australia to an overall less-polluting system of electricity generation if we don't continue to recognise that solar systems produce electricity which is worth a fair price - not a colossal price, but definitely a fair price.

We who have those units on our rooves went to the expense of putting them there within the context of the (previously) nationally-stated aim of moving Australia's overall system of electricity-generation to a more sustainable state of affairs, not just for our short-term personal benefits.

Thankyou for your concern, because a step needs to be taken now on this matter of a fairer price, and not when it's too late.

Sincerely,

Louise Gore
