Submission: "What really worries me about the LNP energy policy is that - they are prepared to forgo our national security to install their ill conceived plans for the energy future of Australia.

Only last week Turnbull was trying to force AGL to sell their 50 year old - now only 50% capacity rated coal fired Liddel power station to the Chinese.

Yet approx. 2-3 years ago they wouldn't sell this power station to the same Chinese company due to Australian security reasons. What a fickle LNP government, they have not done any constructive policy making or any true commitment for Australia's energy future yet in a moment of desperation they will sell out our National security.

Because of the inability of the LNP Government to set a futuristic environmental friendly policy. We the people have taken the initiative by installing solar systems in our homes to try and embarrass this LNP government into setting energy targets for our future.

Now they are trying to reduce the amount of rebates on offer - we must ask ourselves does the LNP Government really care about our environment, or are they there for the top end of town only.

Remember the TRICAL down tax rebates for big business - is this how the system will work - more money for Big Business and to take money of the people who have shown environmental initiatives.

We as Solar investors are entitled to sell our excess power back to the grid at a reasonable rate - we are the people who originally outlaid thousand's of dollars and we should be compensated for returning power to the grid for Power Companies to sell at an inflated price. Example AGL buy my excess power for \$0.11 and sell for \$0.55 without doing any thing - no value adding at all.

Is this not the greatest con job in the history of Australia.

How much profit do they wont - when is enough - enough"
