Submission: "Firstly let it be known that I support a fair price for solar; I think it only fair & just that people who took positive & affirmative action many at considerable expense not be adversely disadvantaged/punished for helping to bring down the price of electricity for all NSW energy users; What is the true message that is being circulated far & wide. Is there a true agenda to save on power provided by fossil fuels or are we being fed another dose of HYPOCRISY !!

Last year more than half of the retailers in NSW failed to offer a FiT within the benchmark range. The FiT needs to be regulated and mandated so that the retailers have to offer it as a minimum;

The feed-in tariff should represent the true value of solar, this means recognising the environmental and health benefits and the network benefits of rooftop solar. I have minimised my energy footprint considerably via an investment in rooftop solar how is it now fair to penalise myself & others who have invested in rooftop solar. It makes zero sense & sends out the wrong message. Time to GET REAL & support those that are supporting the solar system. Thank you for your time."
