

SUBMISSION TO IPART REVIEW
SOLAR FEED-IN TARIFFS 2017/18

Friday, 19 May 2017

12:36:08 PM

We support the increase in the NSW solar feed-in tariff.

By contributing power to the grid, we are doing our share of taking the load off existing power stations and reducing the need to build more. We contribute to the community in terms of cleaner air, cleaner water, reduced health problems (how many coal miners have recently been diagnosed with black lung in Australia?) and have invested in a renewable future. We support a return to a fairer feed in tariff for providing power to the community, that is in line with the wholesale price of electricity. With the increase in tariff, we are in turn able to invest more in expanding solar infrastructure, just as other power companies do.
