SOLAR FEED-IN TARIFFS 2017/18

Wednesday, 10 May 2017

9:11:10 AM

I have been a solar generator for 4 years and since I got on the solar bandwagon I have found that the govt has been limiting what others and myself receive.

We have to move into a better and cleaner world we do need solar on our sides to acheve that. Granted, there is a bell curve with it, It is still a viable means of electricity.

Yet, I am paid on average 6.5 c/per kw when the person down the street gets that for what 29.98 c/per kw. It isn't fair.

If i want to get a solar capture device in my home at this point it's utterly unobtainable. The systems start at 9 or 10k each.

And I'm sure that the govt wont be rebating that hefty sum. So please, pay us the money and we can improve our solar output.

Louise Warren
